Design Choice: Since I already had high-fidelity wireframes of the other screens, I kept the color and fonts consistent throughout. I included some example items in the cart to simulate what the products would look like when they are in the cart. I also kept the structure consistent from the low-fidelity wireframes. I focused on minimizing superfluous detail so that the user doesn't get confused while making the purchase. I adjusted the saturation according to the weight of importance so that the call-to-action is the most prominent icon on the screen.

The rest of my wireframes can be viewed here:
